

# sighttpd

---

Sighttpd is an HTTP streaming server designed for distributing realtime input. It is particularly useful for making camera streams available to multiple clients, and has been designed for embedded systems use.

It includes support for SH-Mobile devices, using the shcodecs-record tool (part of libshcodecs) to capture and encode video streams.

See [www.kfish.org/software/sighttpd](http://www.kfish.org/software/sighttpd) for futher information.

## Download

`sighttpd-1.2.0.tar.gz`

## Source

The source archive is available via git at [github.com/kfish/sighttpd](https://github.com/kfish/sighttpd):

```
git clone git://github.com/kfish/sighttpd.git
```
